Lab 2

Implement Parts I and II assignment of the programming project of chapter 2 of your text book (p.99 and p.101).

To get you started, the initial source and make files are attached.

## What to hand in (using Blackboard):

- Your ".c" file(s) (with appropriate comments). Do not attach project or make files.
- A screen shot of your terminal window showing the insertion of the module and the dump of the log file.

## RULES:

- Each group may consult with other groups/students about GENERAL concepts or methods, but copying code (or code fragments) or algorithms is NOT ALLOWED and is considered cheating (whether copied form other students, the internet or any other source).
- Each member of a group is required to contribute, and will be required to explain and defend every part of work done.
- Only one lab report should be submitted for each group.
- **To get full credit, you must attend the lab, show me your work before you exit the lab (this goes for every student in the group), and submit required files before the posted deadline.**
